PROFESSIONAL SUMMARY

Senior DevOps / DevSecOps / Cloud Engineer with **4+ years** of progressive experience, from Linux systems administration to building, securing, and running production **Kubernetes** platforms on **AWS, Microsoft Azure, and Google Cloud (GCP)** for **AI/ML (GPU) workloads, SaaS products, and Web3/blockchain** infrastructure. Combines **Terraform**, **GitOps**, and **shift-left security** to ship fast without compromising production: cut **deployment time from 15 to under 4 minutes**, reduced **compute cost by ~50%**, and leads incident response and root-cause analysis for production systems.

CORE COMPETENCIES

Multi-Cloud Architecture (AWS, Azure, GCP) • Kubernetes Platform Engineering (EKS, AKS, GKE) • Infrastructure as Code (Terraform, Ansible) • GitOps & CI/CD • DevSecOps & Shift-Left Security • Cloud & Kubernetes Security Hardening • Autoscaling & Cost Optimization • Service Mesh (Istio) • Observability & SRE Practices • Incident Response & RCA • Blockchain / RPC Infrastructure

PROFESSIONAL EXPERIENCE

Senior DevOps / DevSecOps Engineer

01/2026 – Present

Funavry Technologies | Islamabad, Pakistan

- Architect and run **3–5 production Kubernetes clusters** across **Amazon EKS, Azure AKS, and Google GKE**, standardizing VPC/VNet design, **IAM** boundaries, node pools, and workload isolation, with **Terraform** modules (remote state, **Checkov**-scanned) provisioning every environment.
- Deliver every environment across all three clouds through **GitOps** with **ArgoCD and FluxCD**, with automated sync and drift detection keeping clusters identical to Git.
- Engineer request-driven autoscaling with **KEDA** on **Istio/Prometheus** metrics and **Karpenter** node provisioning on Spot and right-sized instances, **cutting compute cost by ~50%**; root-caused failed scale-outs to a **conflicting HPA and an Istio sidecar metric bypass**, restoring reliable scaling for production frontends.
- Operate **multi-node blockchain infrastructure** with load-balanced **RPC endpoints** across cloud and hybrid nodes for high availability.
- Enforce **DevSecOps security gates** in **GitHub Actions and GitLab CI/CD**: **SAST** (Semgrep, SonarQube), **DAST** (OWASP ZAP), **SCA and image scanning** (Trivy), and **secrets detection** (Gitleaks), failing builds on critical findings before deployment.
- Harden clusters and edge with **Kubernetes RBAC**, **network policies**, **Istio mTLS**, centralized **secrets management**, and **Cloudflare WAF, rate limiting, and Turnstile**; lead **incident response and root-cause analysis**, including **PostgreSQL connection exhaustion** and a **Cloudflare JS Challenge** misconfiguration, delivering permanent fixes and runbooks.

DevOps Engineer

03/2025 – 01/2026

IKONIC | Islamabad, Pakistan

- Provisioned and operated production infrastructure across **AWS, Google Cloud (GCP), and DigitalOcean**, running **AWS EKS and Google GKE** clusters plus DigitalOcean container workloads: compute, networking, load balancing, ingress, and service exposure.
- Deployed **Python/React AI applications**, including **GPU-enabled inference workloads**, in containerized environments sized for performance and cost.
- Built **GitHub Actions CI/CD** with dev, staging, and production promotion, packaging services as **Docker multi-stage builds** published to **AWS ECR, Google Artifact Registry, and Docker Hub**, with vulnerability scanning built into the pipeline.

DevOps / DevSecOps Engineer

08/2023 – 03/2025

Forbmax | Islamabad, Pakistan

- Built and operated **3–4 Kubernetes clusters** across cloud and an **on-premises data center**, running a **30+ microservice media-streaming platform**: cluster lifecycle, scheduling, networking, persistent storage, and access control.
- Introduced **GitOps** with **ArgoCD** for declarative, version-controlled releases and safe rollbacks across all 30+ services.
- Engineered end-to-end **Jenkins** pipelines (Pipeline as Code) gated by **SonarQube**, **OWASP Dependency-Check**, and **Trivy** before every deployment.
- Packaged and deployed workloads with **Docker and Helm** behind **NGINX and Traefik** ingress with automated **SSL/TLS** certificate management.
- Established **Prometheus and Grafana** monitoring and alerting, and tuned resource requests and limits for stable workloads.
- Automated server configuration and repeatable deployments with **Ansible** and Bash scripting.

Linux System Administrator

10/2022 – 08/2023

Onyx Tech | Lahore, Pakistan

- Administered enterprise **RHEL 7/8** servers: configuration, security patching, and package management with **YUM/RPM**.
- Managed storage with **LVM and RAID**, and supported **Apache, DNS, NFS, and FTP** services, routing, and **iptables** firewall policies.
- Hardened systems with **SELinux**, and set up monitoring, **backup, and recovery** procedures using rsync and standard Linux performance tooling.

TECHNICAL SKILLS

Cloud Platforms:	**AWS** (EC2, EKS, ECS, ECR, Lambda, S3, RDS, VPC, Route 53, ALB/NLB, CloudFront, Secrets Manager, CloudTrail), **Azure** (AKS, VMs, VNet, ACR, Key Vault, Entra ID, App Gateway, Monitor), **GCP** (GKE, Compute Engine, Cloud Run, Cloud Storage, VPC, Artifact Registry, Cloud Logging & Monitoring), DigitalOcean, Hetzner, On-Premises
Kubernetes:	Amazon EKS, Azure AKS, Google GKE, On-Prem Clusters, Helm, Karpenter, KEDA, HPA, Istio, Kiali, Ingress NGINX, Traefik
DevSecOps:	SAST, DAST, SCA, Container & IaC Scanning, Secrets Scanning, SonarQube, Semgrep, Trivy, OWASP ZAP, OWASP Dependency-Check, Gitleaks, Checkov, Dependabot, Burp Suite
Cloud Security:	IAM/RBAC, Least Privilege, Secrets Management, AWS KMS, Encryption at Rest & in Transit, mTLS, Network Policies, Security Groups/NSG, Cloudflare WAF & Turnstile, AWS WAF, SELinux
CI/CD & GitOps:	GitHub Actions, GitLab CI/CD, Jenkins, Azure DevOps Pipelines, ArgoCD, FluxCD
IaC & Config:	Terraform, Ansible, AWS CloudFormation
Containers:	Docker, Multi-stage Builds, Docker Compose, Docker Hub
Observability:	Prometheus, Grafana, ELK Stack, AWS CloudWatch, Uptime Kuma, k6 (Load Testing)
Data & Messaging:	PostgreSQL, Redis, Elasticsearch, Kafka
Linux & Networking:	RHEL, Ubuntu, LVM, RAID, DNS, NFS, TCP/IP, Load Balancing, iptables, Nginx, HAProxy
Programming:	Go, Python, Bash, Groovy (Jenkins), HCL, YAML, JSON, SQL
Web3:	Blockchain Node Operations, Distributed & Hybrid Node Deployment, RPC Infrastructure

CERTIFICATIONS & TRAINING

AWS Technical Essentials | Amazon Web Services (AWS) — **Oct 2025**

DevOps Course Certification | Intellipaat | Credential ID: 31679-1655-294125 — **Oct 2025**

Microsoft Azure Certification Course | Intellipaat | Credential ID: 31679-1786-294125 — **Oct 2025**

EDUCATION

Bachelor of Science in Computer Science

2018 – 2022

Riphah International University

SPOKEN LANGUAGES

English (Professional Working Proficiency) • Urdu (Native)
